### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jeffrey Proehl on November 1, 2004.

2. The application has been amended as follows:

#### In the Claims

Claim 1, line 11, "draw roller" has been changed to --drawing means--, and  
--linearly reciprocable-- has been inserted before "latitudinal".  
line 13, --linearly reciprocable-- has been inserted before "latitudinal".

Claim 4, line 5, "roller" has been changed to --rollers--.

Claim 10, line 2, "mounting" has been changed to --mounted--;  
line 3, "holders" has been changed to --holder--;  
line 4, , "holders" has been changed to --holder--.

Claim 11, line 12, --roller-- has been inserted after "feeding";  
line 17, --assembly-- has been inserted after "draw roller";  
line 21, the second occurrence of "means" has been deleted, and --said--  
has been inserted before the second occurrence of "motor";

line 22, "means" has been deleted;  
line 24, --assembly-- has been inserted after "roller";  
line 25, --linearly reciprocable-- has been inserted before both  
occurrences of "latitudinal";  
line 35, --two-- has been inserted before "guides".

Remarks

3. The above changes were agreed upon to further clarify the claim language with respect to 35 USC 112 and to more clearly define the claimed invention over the prior art, particularly Perini, 4,487,377.

Additional Prior Art

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The newly-cited prior art disclose inventions which have features similar to the claimed invention. However, these inventions, each taken alone or in combination with the prior art of record, do not teach or fairly suggest the claimed invention. For example, Wakabayashi et al., pn 6,003,420 does not teach or suggest the combination of claimed features, particularly the cutting means, which comprises linearly reciprocable latitudinal cutting and perforating bars as claimed, mounted adjacent to the drawing means as claimed.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clark F. Dexter whose telephone number is (703)308-1404. The examiner can be reached Monday through Friday during normal business hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan N. Shoap can be reached on (703)308-1082. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
